

CS-24-333 6th Meeting

Date: 11/17/2023

Notes:

We changed the name of Milestones to Requirements

An example of a milestone is building a wireframe

Swapped proposal and current working diagram around

End poster will have technical specs

- List of technologies used
- How interface was built
- How database was built if there is one

Can add chatgpt filtering method but its more important to build wireframe

Minimal viable product is being able to click filters and papers pop up

Focus on website not repository

Don't need to add any more papers

In the final repository, we want to have more details like slow or fast speed, instead of just speed.

- Race category more detailed like which race is covered in paper
- For now, it can just be yes or no to filters

Tasks:

Have a wireframe built out before December 1st meeting

- Can be done on powerpoint
- Simulate how when you press one button it goes to next page
- The next page will be the next slide
- No executable code needed to go along with it

A basic framework can be made by coders before December as well

Next Meeting:

Weekly meeting with Dr. Olex every Friday at 12:30pm

Except no meeting next Friday for break

December 1st we will have a meeting

No meeting on December 8th, but we can have meeting on 5th or 7th
